Project 2   DnD) Character Sheet

Tech requirements:

☐ 2 models (if more, make it make SENSE)
    ☐ characters.js
       - this will make the schema in the character sheet
    user.js
      - connect/import dependencies : connection.js
      - schema for user
    connection.js
      - place database_uri in .env → import here
      - import dependencies
      - export mongoose (mongoose.connection - open, close, error)

☐ Incorporate at least one API
    - dnd5eapi.co

☐ Have complete RESTFUL routes
    - index - display created characters (get) ☐
    - edit/new character (post) ☐ ☐
    - update a character (put) ☐
    - display an individual character and their traits (show)(get) ☐
    - delete - a character and be able to delete all characters ☐ ☐   (DESTROY)

☐ Utilize an ODM to interact w/ mongo DB - stored data

☐ Include a ReadMe file
    - refer to this page ☐

☐ Have semantically clean HTML, CSS, and backend code
    - use MVC - (.liquid = HTML) ('public', Bootstrap = CSS)(backend code = .js)

☐ Deploy online by due date

☐ ~~NPC~~ generator ?
    model.

    NPC.js

☐ group of users

ERD #   PROJECT 2

comment

RPG Groups

Stretch goal - add functionality
MVP - have users in a group
         have groups listed for group

Stretch:
- design/upload character images for a session
- if guests aren't logged in, it clears the session + characters
